holistically with a
chain of
representations
through
and beyond Turkey**

ÖKOTEK 

ÖKOTEK 

What makes us unique ?

Our Palette ? and More...

From a pioneer to a reliable partner..

We were founded in 1990 with a motto “not ONLY to sell” a technology or a product, BUT also to give **full technical support** and become a **trustful partner** of the **industry** in the area of environmental technologies, focused specially to **water & wastewater treatment plants** as one of two pioneers in the market.

Ethics, “was & still & will” be always **one step ahead** than to earn money.

Serves to original formula of life

First Ring of the Chain

The first ring of the chain was the “**ion exchange resins**” of Bayer AG in 1990, Lewatit ion exchange resins (nowadays Lanxess - LPT).

So we started “**to make a net**” specially at the **powerplants**, **oil refineries**, **petrochemical-complex**, **breweries**, **food**, **beverage**, **chemical**, **automotive**, **steel**, **metal finishing**, **textile**, **dye**, **paper** and **cosmetic industry**.

Also **the O-EM's** were very happy to get technical informations and the basic design calculations in their mother language (which was not common in those days).

We learned **“to be there”** is
ONE one of the most
important tips.

So our aim was/is **always to
be on the field.**

Serves to original formula of life

After came Sybron – Bi Chem Bacteria Cultures
(nowadays **Novozymes Biologicals – Bio remove**).
We have entered **biological wastewater treatment
system optimisation** in all industries and more.

**Following products and technologies were added to our
representation chain ;**

- Filter Nozzles (KSH GmbH)
- MBR (Microdyn Nadir GmbH)
- RO Membranes (Lanxess Deutschland GmbH)
- UF Membranes (3M)
- LiquiCel Membrane Contactors (3M)

In the last 22 years, of course there were more technologies, we had represented and left due to some ethical problems like ;

UV & Ozon Plants (Wedeco AG), Activated Carbon (Lurgi Aktivkohle, Donau Carbon) and more.

The experience and knowledge of these technologies have been left behind.

Serves to original formula of life

After a while, by getting deep in these products and technologies, we could see **the whole picture and captured the logic behind...**

Starting with the wells, **the whole water** flowing at the factories till the discharge point was in our **interest.**

So our aim became solving customer specific problems and developing cost effective, competitive, technical solutions with the synergy of our representation chain and the experience of ÖkoteK.

Serves to original formula of life

Some of our customers started to request more detailed technical answers and solutions. It took long hours/ days to get over the problem ...

So we decided to found ÖKOSERVIS Technical Services and Consulting. The service department of Ökotek.

ÖKOSERVIS

Aim of Ökoservis is to provide engineering support and consultancy services for tailor made, cost effective and competitive solutions together with our **multi-International Involvements**.

Key area of Ökoservis is Optimizing Water and Waste Water Treatment Systems in an **economic (lower operation cost) and ecologic (lower carbon footprint) way**.

THANK YOU
